Ultrasonic cleaning station US-500

for UV and solved based inks

- ✓ Cleans **VOC free**
- ✓ Integrated flow brush
- ✓ Durable cleaning agent
- ✓ **Saves** time and money

In use for the printing industry

Compact and universal

The ultrasonic cleaning station US-500 is a compact workstation, which can be easily moved thanks to the four rollers. The unit is designed for companies that have to clean few parts per day and are looking for an environmentally friendly and cost-effective solution. In addition to ultrasonic cleaning, it is also possible to clean the parts manually with the integrated flow brush. Depending on the curing degree of the paint, a cleaning cycle lasts between 15 and 30 minutes.

The non-volatile cleaning agent specially developed by NANOVIS has the property that the detached paint particles clump together during standstill periods to form larger paint agglomerations and settle on the floor as a result of gravity. The ultrasonic basin is then emptied sporadically and the paint sludge is removed. Depending on the amount of ink and use, our cleaning agent has a service life of several months.

Technical Data	US-500
Trolley external dimension l x w x h	920 x 500 x 1100 mm
Ultrasonic bath internal dimension l x w x h	500 x 300 x 200 mm
Stainless steel basket l x w x h	450 x 260 x 130 mm
Ultrasonic output	500 Watt, 40 kHz
Electrical supply	230 VAC / 50 Hz
Filling capacity cleaning agent	ca. 19 Liter
